EDUCATION

University of Texas - Austin
Bachelor's, Computer Science

January 2013 - May 2016
GPA: 4

PROFESSIONAL EXPERIENCE

St. Luke's University Health Network
Full Stack Engineer

Bethlehem, PA, USA
December 2021 - July 2025

- Provided ongoing support and enhancements for software systems previously designed and built for hospital operations.
- Delivered production-ready reporting and patient management solutions, ensuring scalability and 99.9% uptime.
- Troubleshooted, optimized, and maintained core healthcare applications, ensuring compliance with healthcare data regulations.
- Collaborated with cross-functional stakeholders to improve system reliability and data accessibility.

Wilder Systems Robots
Technical Lead

Austin, TX, USA
August 2020 - May 2021

- Led development of an automated robotic COVID-19 testing platform processing 6,000+ samples/day, compliant with FDA EUA protocols.
- Designed distributed systems: Python event-driven services, robotic arm control via RPC sockets, GraphQL-powered technician UI.
- Implemented resilient PostgreSQL logging & recovery, ensuring uninterrupted operations.

St. Luke's University Health Network
Full Stack Engineer

Bethlehem, PA, USA
June 2018 - February 2020

- Architected and implemented SLUHN's primary enterprise data mart, centralizing data for hospital reporting and decision-making.
- Designed ETL pipelines using WebFOCUS DSL and Apache Tomcat, loading and transforming data into a Greenplum data warehouse.
- Built Vue.js SPAs enabling analysts to define metrics, drill into dimensions, and control application-level metadata.
- Automated data refresh and roll-up processes, reducing manual intervention and increasing reporting accuracy.
- Created low-code data-fetching techniques to empower analysts to build custom React/Vue reports with ad-hoc queries, drill-downs, and conditional styling.

Information Builders
Software Engineer

New York, NY, USA
February 2017 - December 2017

- Built Cohort Builder, an off-the-shelf tool for longitudinal patient management.
- Designed a Vue.js SPA for defining ICD-10/CPT code-based patient cohorts, enabling tracking across user-defined time windows.
- Improved healthcare reporting accuracy and efficiency for government compliance, provider performance evaluation, and supplemental care detection.
- Delivered scalable backend processes for handling large healthcare datasets with accuracy and security.

Wilcoxon Group Inc
Software Engineer

Dallas, TX, USA
June 2015 - February 2017

- Delivered full-stack contract development services to clients including Minnesota State School Department, Memorial Healthcare System, and Blue Cross Blue Shield Tennessee.
- Worked across requirements gathering, frontend development, system administration, and database management, gaining multi-domain expertise.
- Designed and launched Find Tool, a third-party WebFOCUS application with a Vue.js SPA frontend, enabling users to navigate an encrypted, database-backed file system.
- Productized and marketed Find Tool, expanding its adoption across healthcare and education clients.
